

VORTEX

The Vacuum Suction Excavator

VORTEX

Powerful vacuum technology

The Vortex is one of the most powerful and reliable machines for vacuum and pressure applications, delivering excellent results in any environment and under any conditions. The Vortex is characterised by its user-friendly operation, which enables tasks to be carried out quickly, efficiently and safely.

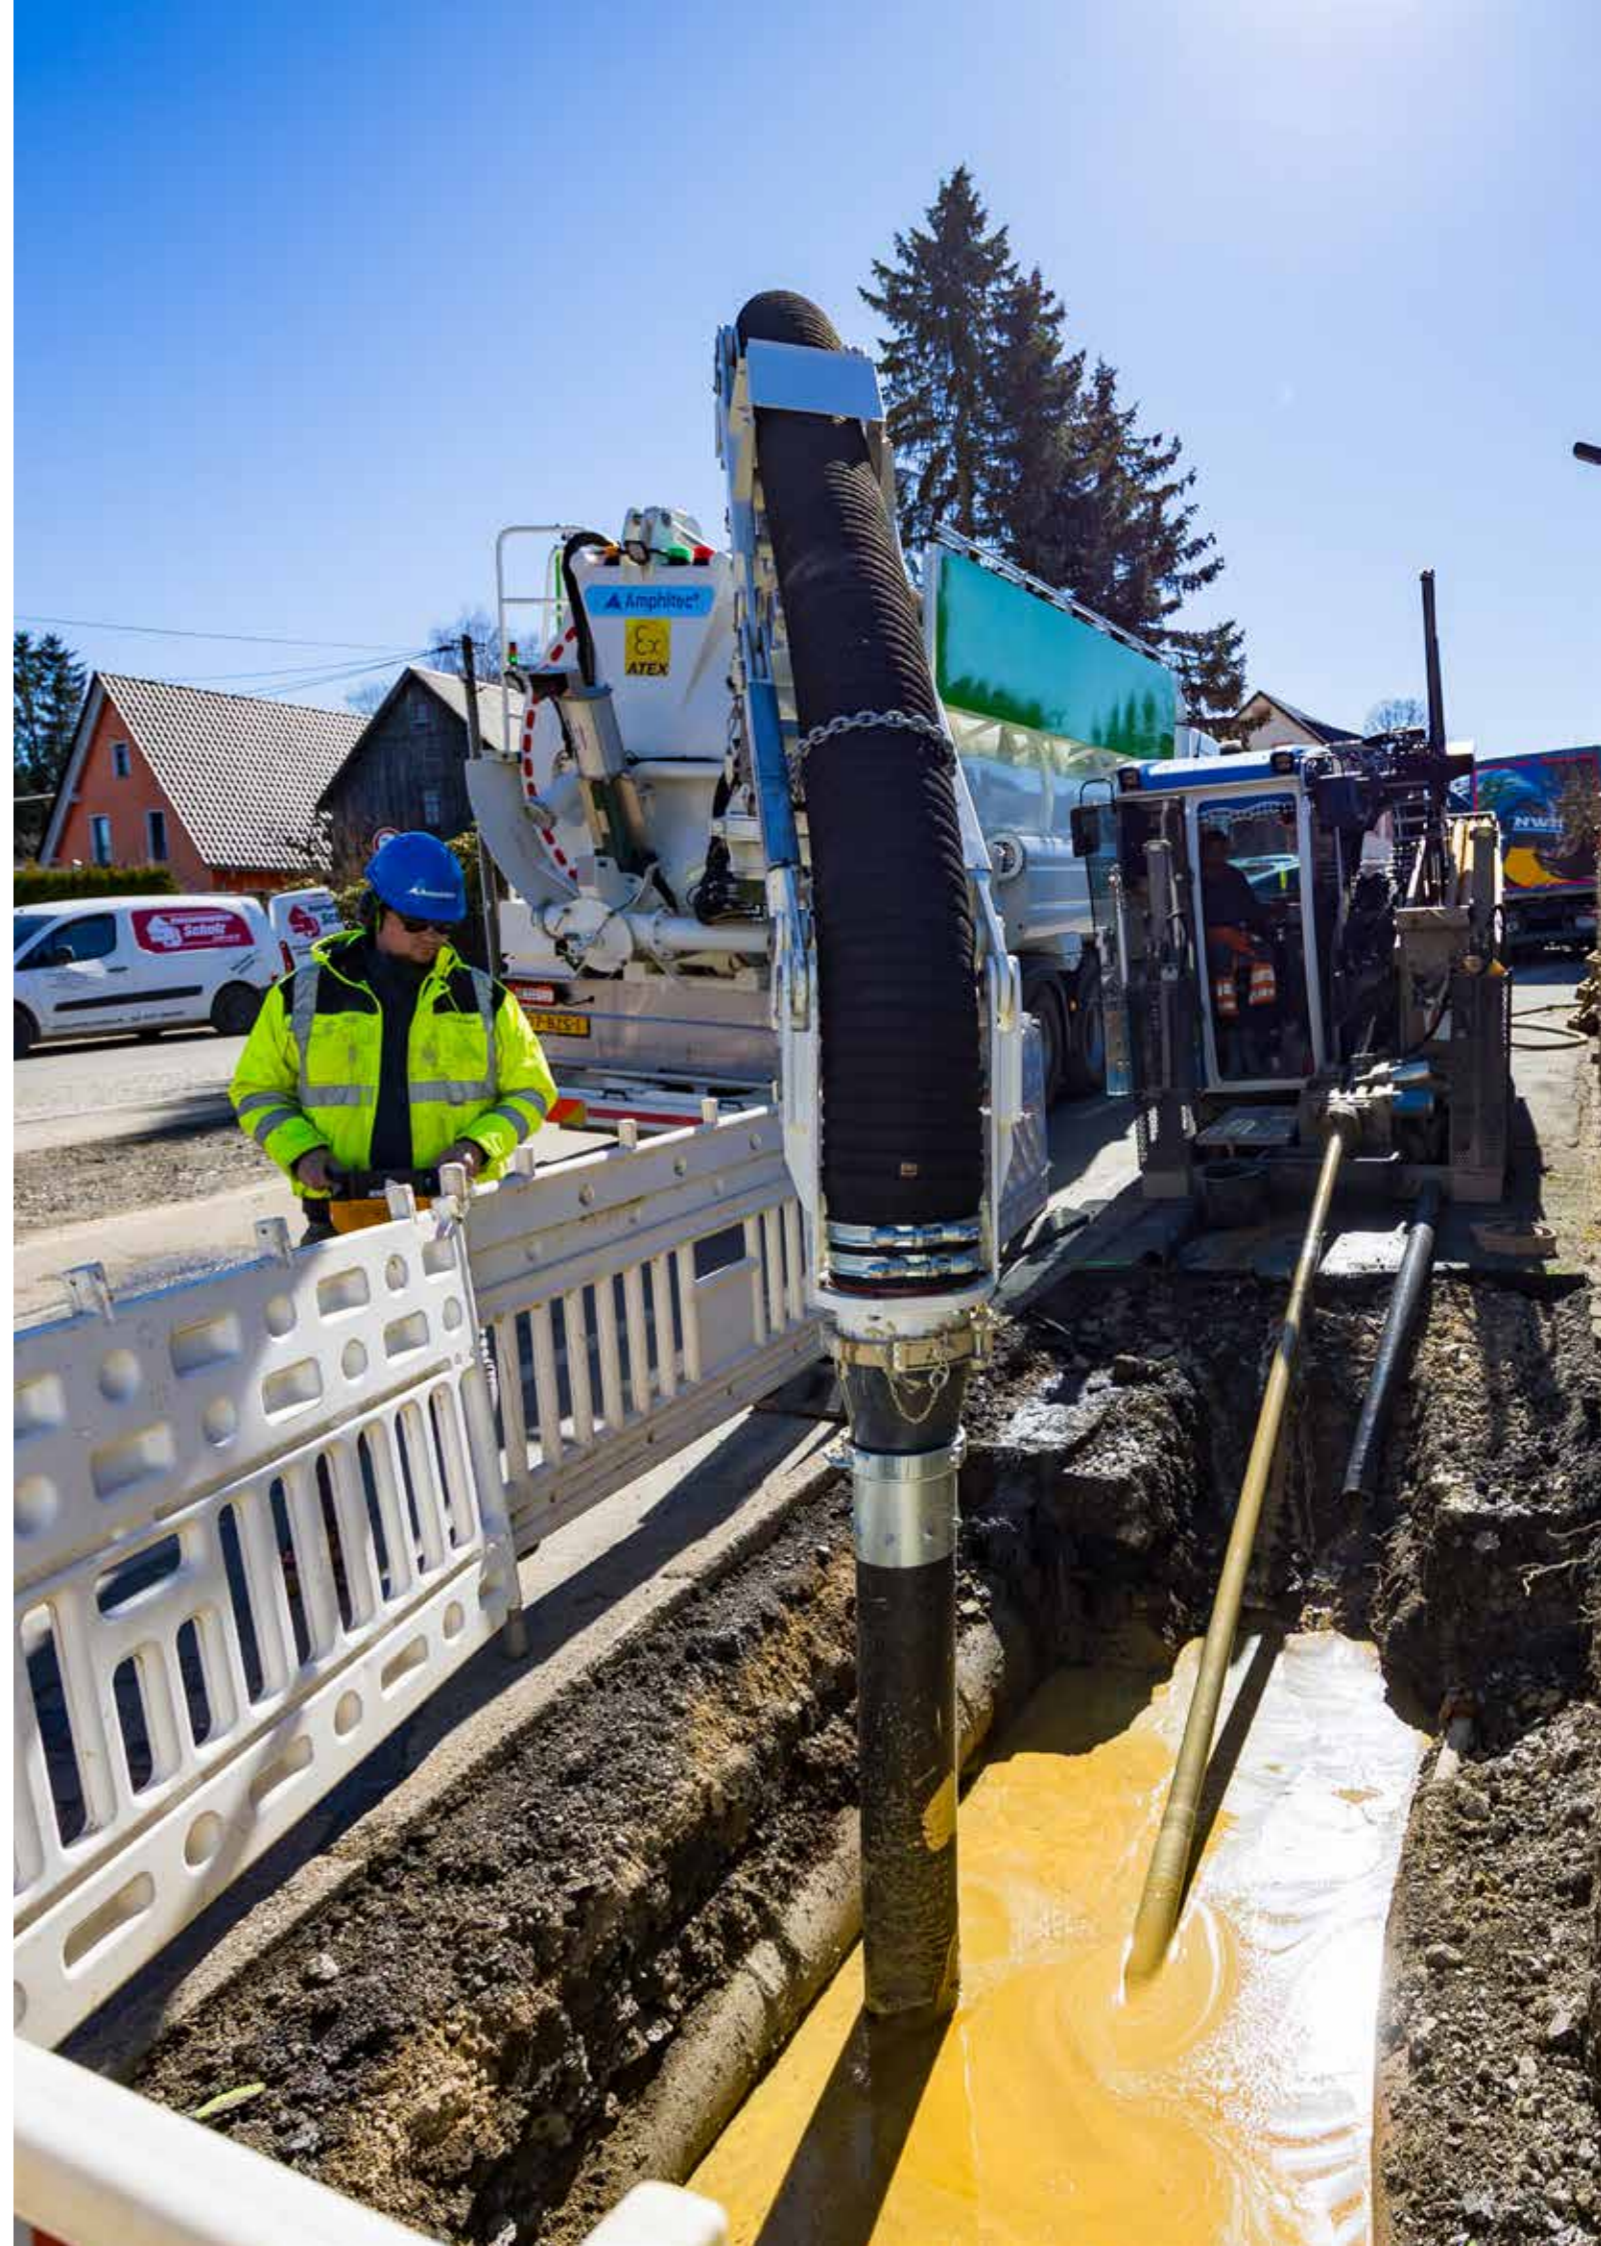

Whether it is extracting sludge and soil in industrial areas or blowing gravel off building sites, the Vortex can handle any challenge. Thanks to its optimal weight distribution, it offers a high loading capacity, which means that the payload can be maximised as required. With its high-vacuum performance, which effortlessly covers distances of over 300 metres, the Vortex opens up new and valuable business opportunities.

Optimal usability

The Vortex impresses with its high suction power, which makes it possible to effortlessly cover distances of over 300 metres.

It is extremely versatile and suitable for a wide range of applications, including dry and wet vacuuming, blowing and cleaning. The user-friendly operation, which is possible both via remote control and directly on the machine, makes it quick and easy to control.

In addition, the innovative design enables straightforward blowing without the need to replace rear covers. The Vortex is also easy to maintain and represents a sustainable solution that impresses with fuel savings and high cost-effectiveness – the power is adapted as needed.

Safety and performance features

The Hi-Lift system enables efficient emptying into big bags and containers. The integrated safety package, which is equipped with ATEX, ADR and SIR certifications, ensures increased safety.

All system functions can be conveniently operated via a remote control, ensuring easy and safe handling. In addition, the system offers the option of integrating additional hydraulic functions. For even more flexible use, 1 to 3 hose holders and/or a hose reel are available.

The extraction arm can be designed as either an industrial or a multipurpose arm, depending on your needs.

Powerful vacuum technology

The Vortex is available in a range of chassis configurations, including 3-, 4- or 5-axis models from renowned brands such as MAN, Scania, Mercedes and Renault.
